

Laserex Technologies

PRESS RELEASE

FOR IMMEDIATE RELEASE:

SUBJECT: Laserex Technologies announces the launch of the all
NEW 3 Wavelength Laser 3000TM™ Veterinary laser.

Adelaide, South Australia, June 2018. Laserex Technologies, announces the world-wide release of its brand new 3 Wavelength Cluster Head Laser 3000TM laser therapy unit.

The Laser 3000TM™ is now available for sale!

The unit comes with 808nm, 830nm and 904nm in the Cluster head along with a **Visible Red** 635nm aiming beam allowing for precise positioning of the head onto the injured muscle tissue.

The combination of the 3 wavelengths has the following effects:

- 808nm – Penetrates deep into tissue for musculoskeletal injuries
- 830nm – Stimulates rapid pain relief and healing of tissues
- 904nm- Accelerates blood cell exchange

Many laser therapy manufacturers only have 1 wavelength in their units. The combination of the 3 wavelengths, all well-known and supported in the research literature for their healing properties, makes the Laser 3000TM one of the most sought after therapy units on the market.

Laserex Technologies, an ISO 9001:2015 Quality Assured Company, designs, manufactures and markets laser therapy units suitable for use by Veterinarians, Owners and Trainers.

The Laser 3000TM is ergonomically designed and can be used without any formal training. Laserex products are manufactured so that price, performance and features are not compromised.
